

S3 Table. Hazard ratios (HR) from Cox regression predicting risk of divorce in individuals with three children by first and second birth interval and their interaction.

	HR (95% CI)	p
1st IBI		
≤ 18 months	Ref.	
18.01 - 24	0.95 (0.57, 1.59)	.844
24.01 - 36	0.59 (0.36, 0.97)	.039
36.01 - 48	0.78 (0.44, 1.38)	.397
> 48	0.82 (0.48, 1.40)	.461
2nd IBI		
≤ 18 months	Ref.	
18.01 - 24	1.37 (0.86, 2.18)	.183
24.01 - 36	1.09 (0.70, 1.68)	.709
36.01 - 48	0.83 (0.52, 1.33)	.436
> 48	0.90 (0.57, 1.43)	.663
Interaction between 1st IBI of 18.01-24 months and 2nd IBI of		
18.01 - 24	0.63 (0.34, 1.17)	.141
24.01 - 36	0.74 (0.42, 1.31)	.309
36.01 - 48	0.90 (0.49, 1.63)	.719
> 48	0.92 (0.53, 1.59)	.752
Interaction between 1st IBI of 24.01-36 months and 2nd IBI of		
18.01 - 24	0.90 (0.49, 1.63)	.722
24.01 - 36	1.02 (0.58, 1.78)	.945
36.01 - 48	1.45 (0.81, 2.58)	.211
> 48	1.36 (0.79, 2.32)	.263
Interaction between 1st IBI of 36.01-48 months and 2nd IBI of		
18.01 - 24	0.86 (0.45, 1.67)	.662
24.01 - 36	1.04 (0.56, 1.95)	.894
36.01 - 48	1.33 (0.70, 2.53)	.392
> 48	0.98 (0.54, 1.80)	.957
Interaction between 1st IBI of > 48 months and 2nd IBI of		
18.01 - 24	0.65 (0.35, 1.21)	.175
24.01 - 36	1.21 (0.69, 2.15)	.508
36.01 - 48	0.97 (0.51, 1.84)	.934
> 48	0.95 (0.53, 1.69)	.855

Note. The model additionally controls for birth cohort, marriage length at the birth of third child, sex, age at first reproduction and timing of marriage.
